SSi Deployment Options

OnPremise License - An iLS™ license is purchased for installation on servers behind the facility firewall. An annual Maintenance Agreement is purchased after year 1 that includes support, enhancements, and upgrades. If MX is not purchased the iLS™ software continues to function, however no upgrades or enhancement will apply and technical support is available for a fee.

SaaS - An iLS™ software-as-a-service subscription is purchased which includes secured hosting, maintenance, support, enhancements, and upgrades. This predictable "pay as you go" cost model precludes a need for internal IT resources. If the subscription lapses for payment, the iLS™ access is terminated, since they do not own a software license. A downloaded copy of the recent User Data will be delivered as this information is owned by the facility.

SSi deploys the interactive Learning System (iLS™) with features most sought after for learning management.

- > Deliver employees and tenants FAA, TSA and OSHA regulatory safety & security training securely from any device - any where.
- > Choose from our extensive course library or customize modules to your airport.
- > Integrate with access control, credentialing and HR systems.

Flexible pricing plans based on your budget ranging from on-premise to software subscriptions solutions.
